PART 03

Product Advantages

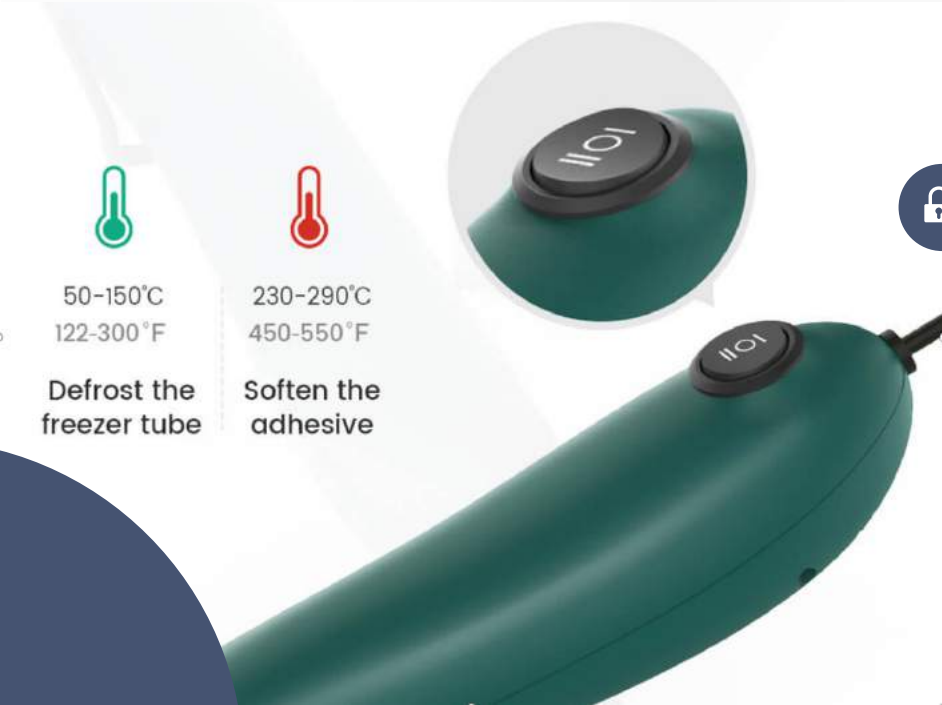

Product Advantages

Unique Air Duct Design

Greatly improving the air heating efficiency

The unique design of the air duct provides good temperature uniformity, extending the service life of the product. The air duct is one of the most important systems in a heat gun, and if the ducts are poorly sealed or insulated they are likely contributing to higher energy bills. In product design, proper duct system design is critical. In recent years, energy-saving designs have sought to include ducts and heating systems in the conditioned space.

Dual Temp Hot Air Gun

Variable speed/heat setting

The unique design of the air duct provides good temperature uniformity, extending the service life of the product. The air duct is one of the most important systems in a heat gun, and if the ducts are poorly sealed or insulated they are likely contributing to higher energy bills. In product design, proper duct system design is critical. In recent years, energy-saving designs have sought to include ducts and heating systems in the conditioned space.
